PROFESSIONAL SUMMARY

Proven Senior Backend/Full Stack Engineer with 10+ years of experience architecting secured, scalable cloud-native and AI-driven systems. Owns the end-to-end design and delivery of complex products - from system architecture and data modeling to backend services and client-side applications-through to production readiness. Rapidly adopts and operationalizes new technologies, with a strong focus on AI driven development and agentic workflows.

CORE SKILLS

<u>Frontend</u>	<u>Backend</u>	<u>Databases</u>	<u>INFRA</u>	<u>AI</u>
React.js, Angular, Redux, MobX, TypeScript, Html, js, css, websockets	Python, Node.js, Java,GraphQL, APIs,Microservices Sockets, Kafka, RabbitMQ	MYSQL, PostgreSQL, MongoDB, Redis, InfluxDB	Docker, Kubernetes Jenkins	Langchain, Langraph, MCP, SLM, RAG agentic-workflows, Claude code, Langfuse

WORK EXPERIENCE

Dec2019 - Present **Senior Backend / Full stack Engineer at Huawei.**

2025 – Present – **Huawei Cloud Agentic Core AI Team**

Agentic AI Planer Agent

- Architected and deployed a production-grade agentic orchestration framework using Langraph and Python, cyclic multi-agent workflows with stateful reasoning.
- Designed and built a training and deployment pipeline for Small Language Models (SLMs), enabling replacement of latency-critical LLM components with efficient SLMs, resulting in significant latency reduction and measurable cost savings while maintaining system accuracy.
- Built advanced observability and tracing with Langfuse, implementing end-to-end execution monitoring and trace-level diagnostics to identify reasoning bottlenecks and optimize agent performance, analyze failure patterns to improve planning quality, reliability, and system insight.

2024 – 2025 – **Huawei Cloud Security Team**

- Development of LLM security infrastructure as part of the Security team, designing and owning classifier-driven (state of the art) RBAC for LLMs, including end-to-end evaluation frameworks, internal UI tooling, and RAG data reinterpretation and persistence to ensure controlled, auditable model behavior and data protection.
- Built two critical multi-agent workflows, incorporating human-in-the-loop decision points to balance autonomy with safety and correctness—bridging system intelligence with real-world operational constraints.

2019 – 2024 - **Backend/Fullstack Blockchain Developer**

- Ethereum Data Platform: Architected and led a full Ethereum Web3 data indexing pipeline, ingesting on-chain blocks into PostgreSQL and exposing them via a GraphQL API built with

Prisma ORM. Designed a dynamic querying system that automatically generated federated GraphQL queries across distributed services, enabling flexible, user-driven blockchain analytics at scale.

- Chronix (Hyperledger Fabric Extension): Extended core Hyperledger Fabric functionality by integrating time-series storage (InfluxDB) and enhancing ledger state management, resulting in improved performance, scalability, and resilience under high-load conditions.
- BDB (Workflow & BPMN Platform): Delivered an end-to-end BPMN execution platform, designing and implementing:
 - A secure management UI and API gateway with JWT-based authentication and authorization
 - Backend microservices architecture integrated with ORM and RabbitMQ
 - A scalable foundation built from scratch for enterprise workflow automation
- Acted as a technical mentor, guiding the development of a VS Code extension for BPMN process modeling, improving developer productivity and adoption.

2016 – 2019 - **Fullstack Developer / Team Lead / Tech Lead - Devalore**

Led and delivered end-to-end systems from scratch for enterprise and startup clients, working in Agile environments as both Team Lead and hands-on engineer.

- Tech Lead (AnyVision): Built a large-scale image recognition insights platform using microservices, Kafka, and PostgreSQL, while leading frontend and backend teams.
- Team Lead (TripleMars): Architected an AWS-based, microservices-driven dropshipping automation platform (.NET Core, DynamoDB, SQS, Cognito, React).
- Team Lead (Rafael) Delivered mission-critical and high-impact product across investigation virtualization system.
- Developer (TechFinancial) Fintech real-time trading web apps.
- Developer (Loveme) React-Native dating application

2015 – 2016 - **Fullstack Developer - Zoom Analytics**

Developed customer-facing analytics widgets and UI features for a startup product, contributing directly to user experience and feature delivery using JavaScript, jQuery, PHP, and MySQL.

2014 – 2015 - **Independent Projects**

Designed, built, and deployed full-stack web products from scratch, including a social community platform, gaining hands-on experience across frontend, backend, and deployment.

Education

2013 – 2016 - The Bachelor of Computer Science at HIT: Graduated (Average 91), **Dean's List**

2007 - Graduated with an increased computer science profession.

Languages

Hebrew - Native, English - Very Good, Russian - Very Good

Fun Fact

Semi-Professional table-tennis player

Salary Expectations

220,000\$ + RSU
